Claim Rejections - 35 USC § 103

1. Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wakai et al (US 5166085) in view of Takahara (US6219113).

Wakai discloses an active matrix LCD device comprising : a pixel electrode 110 formed on an insulating layer 108; the insulating layer formed on a thin film transistor; the pixel electrode connected to the thin film transistor via a contact hole through the insulating layer.

A white pixel defect is easy to see visually, while a black pixel defect is difficult to see. Takahara discloses when a short-circuit defect occurs, a short-circuited portion is cut with a laser trimming unit, wherein the primary object of the point defect correction is to correct a white point defect to a black point defect (col. 69, lines 59-65, col. 71, lines 60-64). Therefore, it would have been at least obvious to one of ordinary skill in the art to correct a white point defect to a black point defect via a laser, as taught by Takahara.

Cutting off the TFT and the pixel electrode from each other (obviously) implies that the pixel electrode is cut in the vicinity of the contact (i.e. source or drain electrode) connecting an electrode of the TFT to pixel electrode.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Art Unit: 2871

3. Claims 1-8 are rejected under 35 U.S.C. 102(e) as being anticipated by Iizuka et al (US 6515720).

Iizuka discloses an active matrix LCD comprising : a pixel electrode formed on an insulating layer; the insulating layer formed on a thin film transistor; the pixel electrode connected to the thin film transistor via a contact hole through the insulating layer.

Iizuka discloses that when the short circuit occurs, a pixel including the short-circuit defect can be improved to a half-lighted state (i.e., darken) by radiating a laser beam to the wiring portion to electrically cut it.

See at least Figures 1-3 for all claims.

Response to Arguments

4. Applicant's arguments with respect to all claims have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period

Art Unit: 2871

will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
